

MISSA 2010

Slow Movies - Allan Mandell

Student supplies:

Students will need a digital camera and a laptop computer. Ideally the student's laptop will have some kind of image processing & file management software installed, such as Photoshop Elements, iPhoto, Aperture or Lightroom, and ultra-ideally will have slideshow software such as Pro Show Gold (PC) or Keynote (Mac). This will make things easier, however having this software is not absolutely necessary. The main movie will be built on the instructor's desktop iMac.

Students need to bring the appropriate power cables & connections for image downloading and transferring. A flashdrive will come in very handy.

Students are asked to bring a sampling of music on cd or on their laptops for possible use as soundtrack. Headphones will be helpful.
